3.Which two functions can be used to manipulate character, number, or date column values?   **Correct**

  1. CONCAT   2. ROUND

  3. TRUNC   4. RPAD

Actual Answer:
   CONCAT
   RPAD

User Answer:
   RPAD
   CONCAT

4.what are the different models in RDBMS   **Correct**

1. Physical model

2. Logical model

3. Conceptual model

4. All of the above

Actual Answer:

    All of the above

User Answer:

    All of the above

5.what is false about where clause   **Correct**

1. it filters the records based on condition

2. aggregate functions can be used in where clause

3. it restrict rows in a table

4. none of the above

Actual Answer:

    aggregate functions can be used in where clause

User Answer:

    aggregate functions can be used in where clause

6.Indexes are: **Wrong**

1. Not Db object

2. retrieve data faster

3. store the values if clustered

4. it is a keyword

Actual Answer:

    retrieve data faster

    store the values if clustered

User Answer:

    store the values if clustered

Mentor FeedBack: ○ Ok   ○ Bad   ○ Conceptually/Logically

8.what functions are lead and lag?   **Correct**

1. it is aggregate functions

2. it is pseudocolumns

3. it is analytical functions

4. none of the above

Actual Answer:

    it is analytical functions

User Answer:

it is analytical functions

9.select cust_name from customer where rownum = 3   **Wrong**

1. One record gets displayed   2. No results found

3. invalid column or function rownum   4. syntax error

Actual Answer:
No results found

User Answer:
syntax error

Mentor FeedBack: ◯ Ok   ◯ Bad   ◉ Conceptually/Logically

10.Which two statements are true about Where And Having Clause   **Correct**

1. A Where clause can be used to restrict both rows and   2. A where clause can be used to restrict rows only
groups

3. A Having clause can be used to restrict both rows and   4. A Having clause can be used to restrict groups only
groups

Actual Answer:
A where clause can be used to restrict rows only
A Having clause can be used to restrict groups only

User Answer:
A where clause can be used to restrict rows only
A Having clause can be used to restrict groups only

11.A subquery can be used to _____   **Correct**

1. Create groups of data   2. Sort data in a specific order

3. Convert data to a different format   4. Retrieve data based on an unknown condition

Actual Answer:
Retrieve data based on an unknown condition

User Answer:
Retrieve data based on an unknown condition

12.What is an entity: **Correct**

1. Table   2. Attribute

3. column   4. none of the above

Actual Answer:
Table

User Answer:
Table

13.Which commands are auto commit   **Correct**

1. DML   2. DDL

3. rollback

4. none

Actual Answer:
    DDL

User Answer:
    DDL

14.what is self join   **Wrong**

1. table which have self referential integrity constraint

2. table which have 2 tables

3. joining the table to itself

4. Joining with multiple instances

Actual Answer:
    table which have self referential integrity constraint
    joining the table to itself

User Answer:
    joining the table to itself
    Joining with multiple instances

Mentor FeedBack: ◯ Ok   ◯ Bad   ◯ Conceptually/Logically

15.What is rowid   **Correct**

1. it is physical address

2. it is in hexadecimal digits

3. it is pseudocolumn

4. all of the above

Actual Answer:
    all of the above

User Answer:
    all of the above

16.What does currval indicates in Sequences   **Wrong**

1. it gives the current value of the sequence

2. it is pseudocolumn

3. it is a function in sequence

4. it gives nextvalue of the sequence

Actual Answer:
    it gives the current value of the sequence
    it is pseudocolumn

User Answer:
    it gives the current value of the sequence

Mentor FeedBack: ◯ Ok   ◯ Bad   ◯ Conceptually/Logically

17.what is Merge   **Correct**

1. it is DCL command

2. it is DDL command

3. it is DML command

4. It is TCL command

Actual Answer:
    it is DML command

User Answer:
    it is DML command

18.Dynamic Catalog in oracle is also called as   **Wrong**

1. data dictionary   2. meta data

3. information_schema   4. views

Actual Answer:
    data dictionary
    meta data
    information_schema

User Answer:
    information_schema

Mentor FeedBack: ○ Ok   ○ Bad   ○ Conceptually/Logically
